CLAIMS

- 1. A compressor characterized in that a nonpolar refrigerant is used as a working fluid and an insulation part of a rotating section is formed from a low dielectric constant plastic film having a specific dielectric constant of 1.2 to 3.0.
- 2. The compressor in accordance with claim 1, wherein said nonpolar refrigerant contains at least one of propane and isobutane.
- 3. The compressor in accordance with claim 1, wherein said nonpolar refrigerant is carbon dioxide.
- 4. The compressor in accordance with claim 1, wherein said working fluid contains a nonpolar oil as a lubricating oil.
- 5. The compressor in accordance with claim 4, wherein said nonpolar oil is a mineral oil.
- 6. The compressor in accordance with claim 1, wherein said low dielectric constant plastic film is a polyester film having pores therein.
- 7. The compressor in accordance with claim 6, wherein said film has a pore volume ratio of 10 to 95 vol%.
- 8. The compressor in accordance with claim 7, wherein said pores have a mean pore size of 0.1 to 10 $\mu \rm m.$
- 9. The compressor in accordance with claim 1, wherein said low dielectric constant plastic film is a

fluorocarbon resin film.

- 10. The compressor in accordance with claim 6, wherein said low dielectric constant plastic film is a laminated composite film comprising a base film having a low dielectric constant and an auxiliary film having a higher dielectric constant than said base film.
- 11. The compressor in accordance with claim 6, wherein said low dielectric constant plastic film has a specific dielectric constant of 2.0 to 2.8.
- 12. The compressor in accordance with claim 1, wherein said low dielectric constant plastic film forms at an iron core of said rotating section, an insulation part for insulating a field coil and a slot.
- 13. A refrigerant system device comprising the compressor in accordance with claim 1.
